

Lab 5 Tasks

Advanced Workshop

Spring 2026

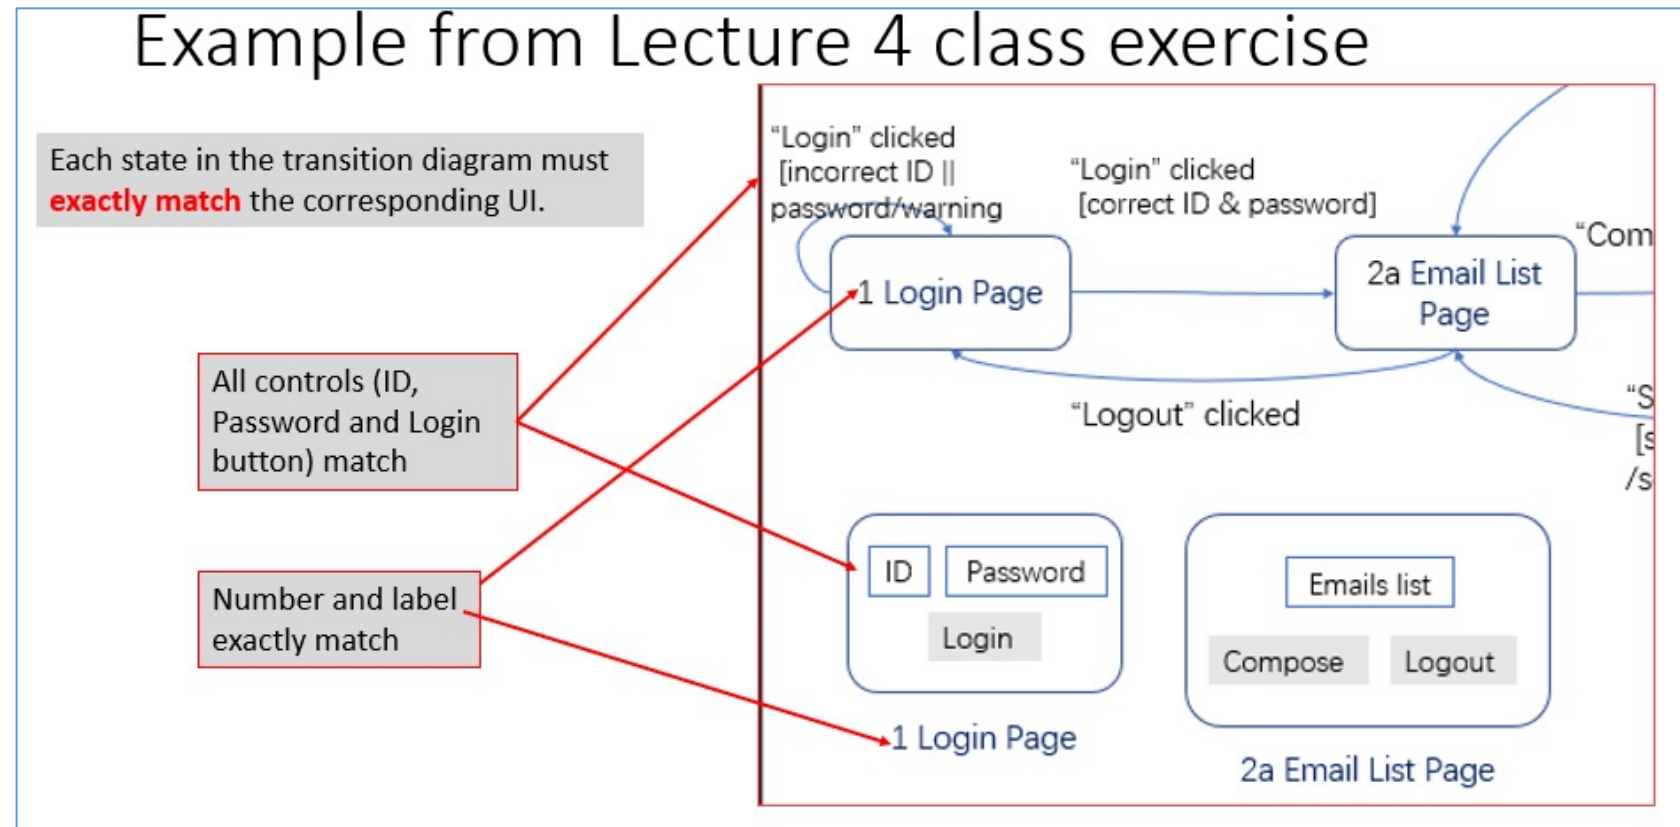

Main Tasks

1. Teacher review feedback from last week on SRS partial document.
2. Teacher explains solution for last week's tasks.
3. Students
 - A. Update SRS partial documents according to feedback.
 - B. Create state transition diagrams and user interfaces for **all** use cases.
 - C. Create a basic scenario for each import use case.
 - That would help you to create the transition diagram.

Task1: Feedback from Last Week

(A) Transition diagram and UI must **exactly match**:

- Each **state** in the transition diagram **must have** a corresponding **UI**.
- Each **state** in the transition diagram **must have** a **number** and **label** that **exactly match** the **number** and **label** in the corresponding **UI**.

Task1: Feedback from Last Week

- Every **event** and **condition** in a transition diagram state **must have** a corresponding **control** in the **UI diagram**.
 - If a transition diagram state has the event “Click Button 1”, the corresponding UI must have a Button 1.
- A **UI diagram** should **not have** any button, control object or other unnecessary junk **not used** in the transition diagram.

Task1: Feedback from Last Week

(B) Transition diagrams:

- The same **number** in a state **cannot be reused** in another state.
 - Cannot have “2. Search Student Info” and “2. Search Mentor Info”.
- Improper actions
 - “Go to Edit page” is not a proper action, because the arrow in the transition diagram is already pointing to Edit page.
- Warning boxes and other controls with only one button are not states; they should be actions.
- *Every state after login has a “**Home**” button for users to return to their respective home pages.*
- Only need to have the state “1. Login” in the login transition diagram. In other transition diagrams, you can start with the home page(s) and put “Assume the user has logged in” as a requirement in 3.x.3.

Task1: Feedback from Last Week

(C) UIs and UI file

- Must put all UIs in a UI file separate from the SRS document.
- Should have **one** complete **set of UIs** for **all transition diagrams**.
 - The UIs in the UI file should **not** be **organized** by **transition diagrams**.
 - Should **not** have one set of UIs for one transition diagram, and another set of UIs for another transition diagram.
- A UI **cannot** appear **more than once** in the UI file.

Task1: Feedback from Last Week

- The UIs in the UI file should be organized by the numbers in the label.
- Organize the number in the UIs something like this:
 - UIs for **Login and Home Pages** begin with **1**.
 - E.g. 1 Login, 1A Home Mentor, 1B Home Student, 1C Home Faculty Consultant, etc.
 - UIs for **Search, Edit** and **Export** pages begin with **2**.
 - E.g. 2A1 Search Stud Info Page, 2A2 Edit Stud Info Page, 2B Search Mentor Page, etc.
 - These are pages for the highest priority goal-oriented use cases.
 - UIs for **Utilities** begin with **3**.
 - E.g. 3A Sent Message Page, 3B Make Appointment Page, etc.
 - These are the support pages for those beginning with 2.
 - UIs for **Admin** and **Maintenances** begin with **4**.
- In the UI file, list the UI diagrams by their numbers.
 - For any state in the transition diagram, we can easily find the corresponding UI in the UI file by looking up its number.

Task1: Feedback from Last Week

(D) Scenario

- User action and systems response must alternate.

Task1: Feedback from Last Week

(E) Miscellaneous Remarks

- In the cover, write down the contribution by each member: Full, Fair, Little or None.
- Font sizes should not be too small
 - Font size in the transition diagram and UIs should be **comparable** to the size of the **regular text** in your document.
 - The numbers and labels for a state and UI should be a little bigger, and the text for the event/condition/action can be a little smaller.

Task1: Feedback from Last Week

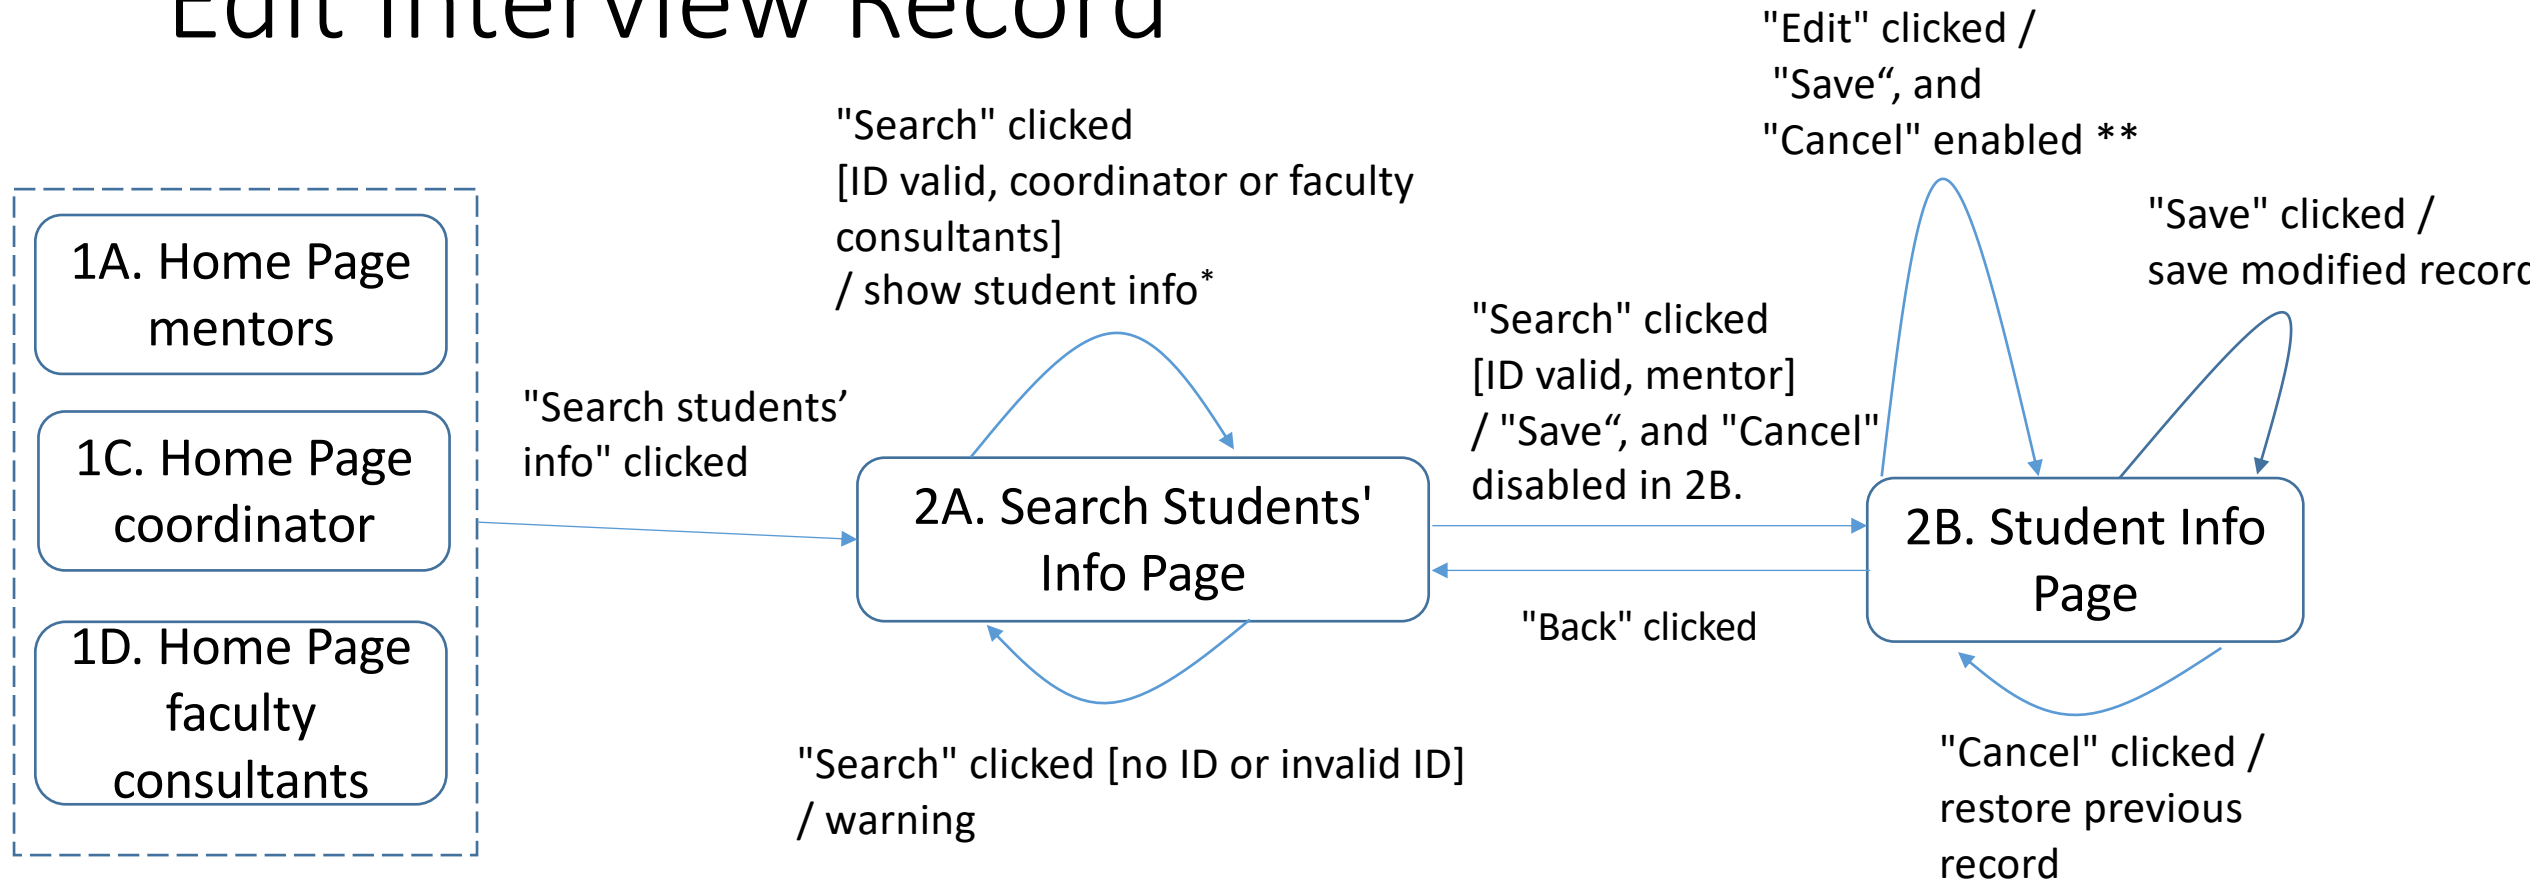

(F) Specific Common Errors

- In some transition diagrams such as Search Student's Info / Edit Interview Record, must consider the actor in the condition.
 - Otherwise, you allow the coordinator to edit the interview record.

Task2: Solution to last week's tasks

- OK to put Search Students' Info (left hand side of next slide) in 3.1.2.
 - No points deducted if you did that.
- But the combine transitions of 3.1 Search Student's Info and 3.2 Edit Interview Record contains the same states as 3.1.2.
 - Only need to add the controls for 2B. Student Info at the far right of next slide in order to combine 3.1 with 3.2.

Transition Diagram: Search Students' Info + Edit Interview Record

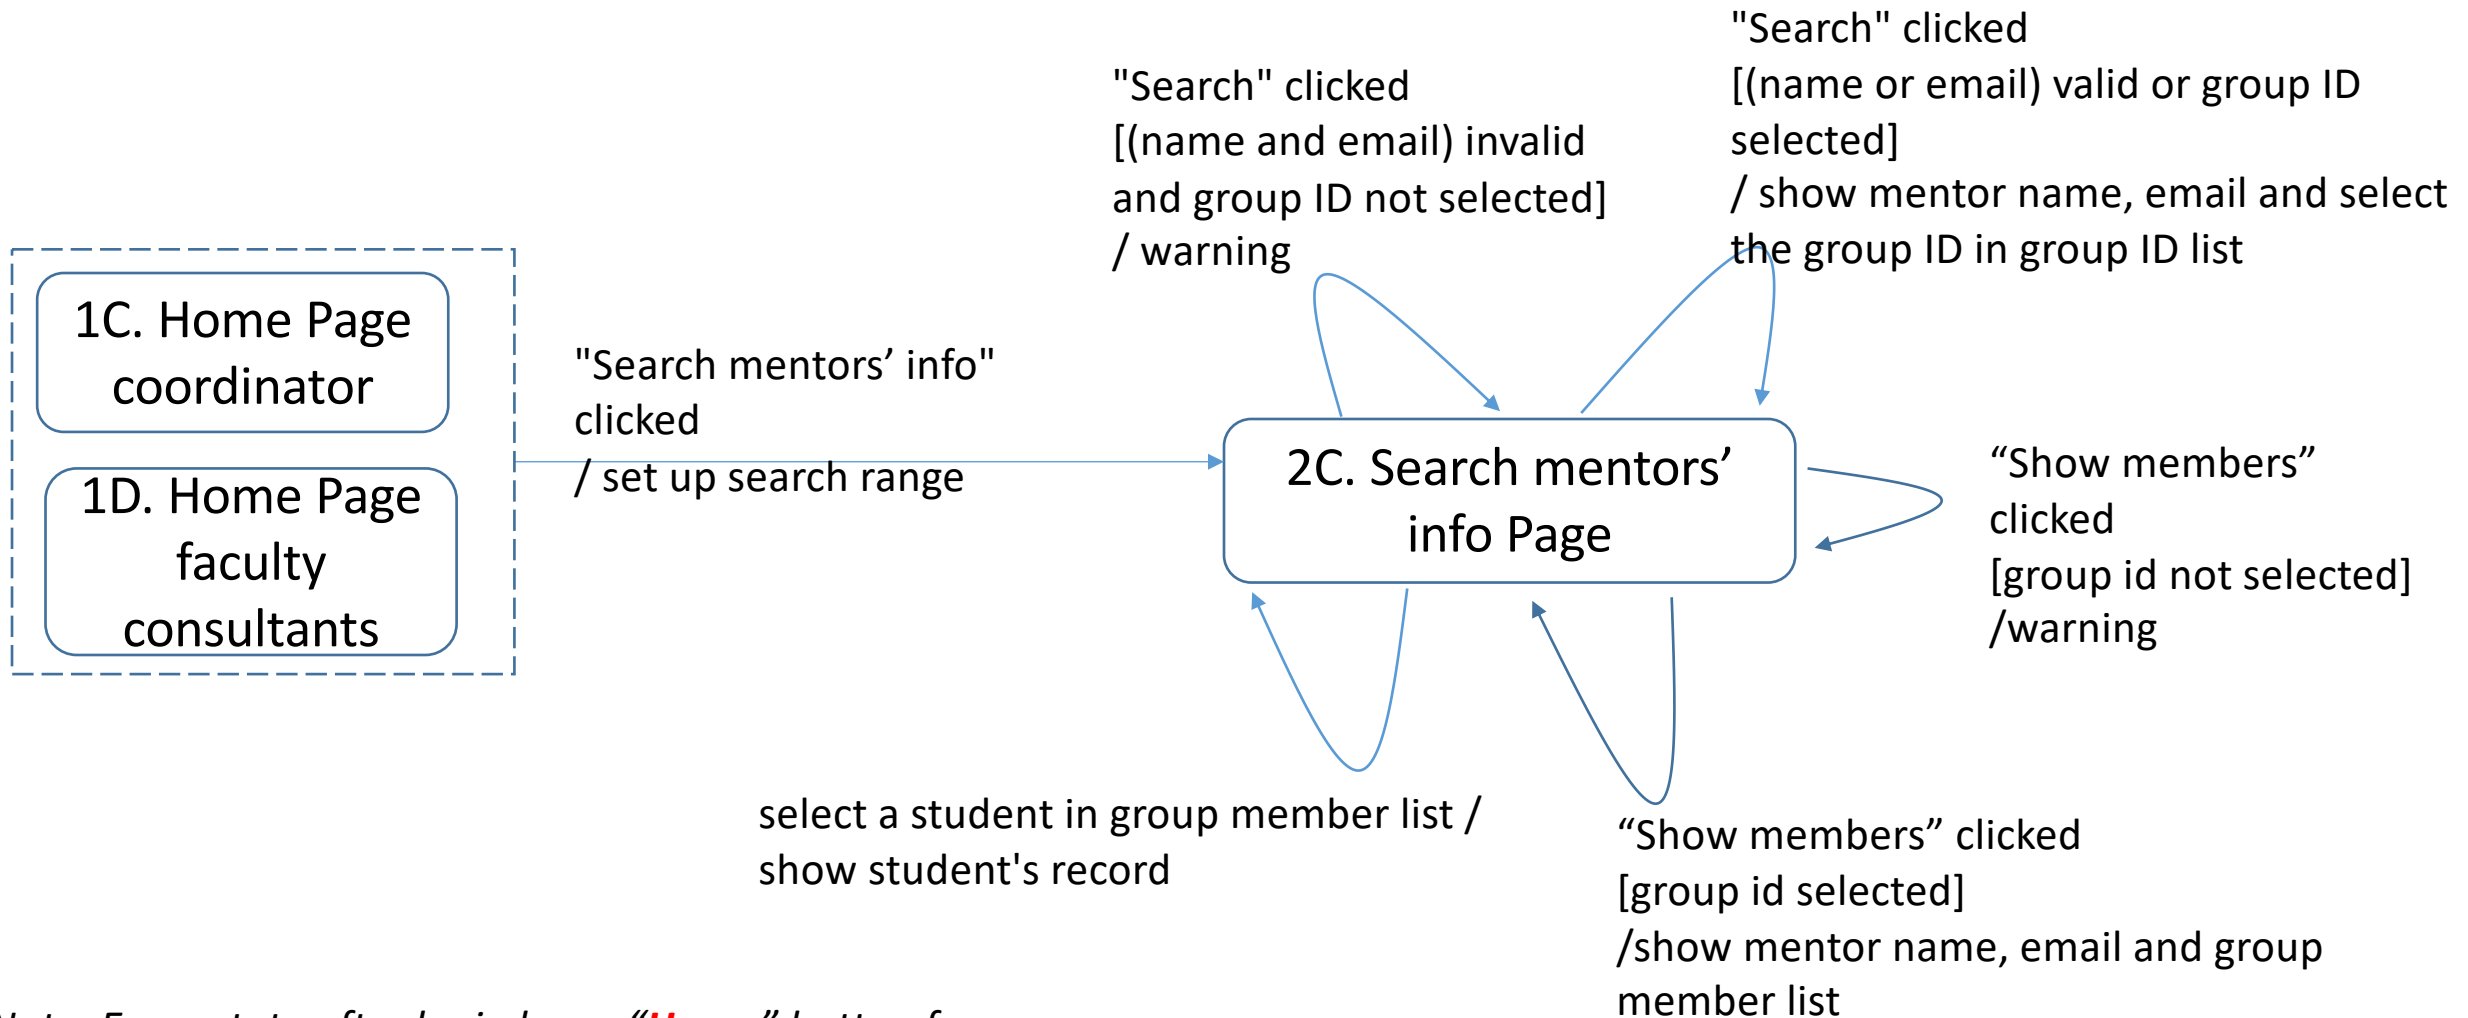

*Note: Every state after login has a "**Home**" button for users to return to their respective home pages.*

** Show student info is 2B. Student Info Page without Edit, Save and Cancel. i.e. it's a message box.*

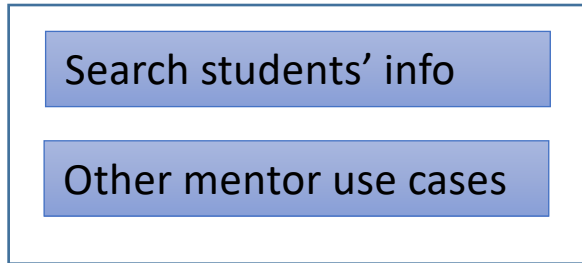

*** User can add, modify or delete record, followed by Save or Cancel.*

Transition Diagram: Search Mentors' Info

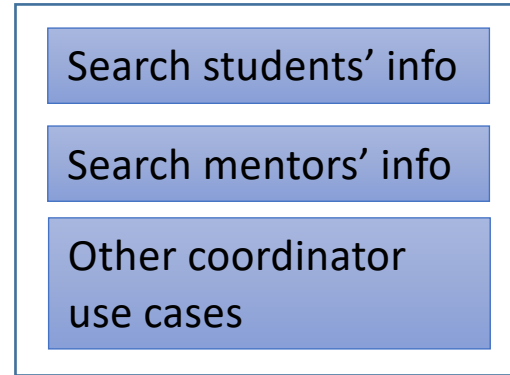

*Note: Every state after login has a "**Home**" button for users to return to their respective home pages.*

UI

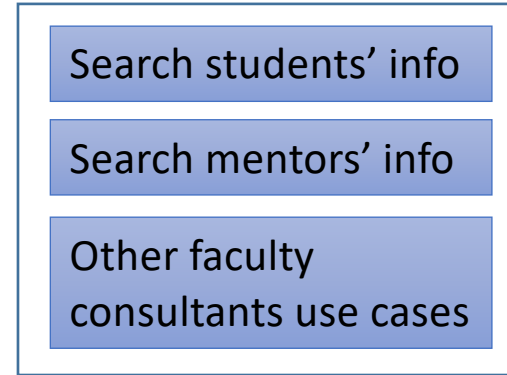

A rectangular box containing two blue buttons stacked vertically. The top button is labeled "Search students' info" and the bottom button is labeled "Other mentor use cases".

1A. Home Page
mentors

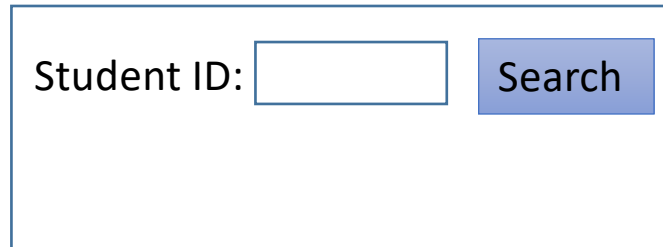

A rectangular box containing three blue buttons stacked vertically. The top button is labeled "Search students' info", the middle button is labeled "Search mentors' info", and the bottom button is labeled "Other coordinator use cases".

1C. Home Page
coordinator

A rectangular box containing three blue buttons stacked vertically. The top button is labeled "Search students' info", the middle button is labeled "Search mentors' info", and the bottom button is labeled "Other faculty consultants use cases".

1D. Home Page
faculty consultants

A rectangular box containing the text "Student ID:" followed by a text input field and a blue button labeled "Search".

2A. Search Students' Info
Page

A rectangular box containing a blue button labeled "display other info here" at the top. Below it is a larger white box with a blue border containing the text "display records here, if exists". At the bottom are four blue buttons arranged in a 2x2 grid: "Back", "Edit", "Save", and "Cancel".

2B. Student Info Page

Note: Every state after login has a "Home" Button for users to return to their respective home pages

UI (continue)

mentor name:		Show members	
mentor email:			
group id:	Group ID List 	Search	Back
display group member list here, if any			
display students' record here, if any			

Task4: New tasks this week

1. Students update the SRS according to the feedback.
2. Create the **state transition**, and **UI diagrams** for **all use cases**.
 - You should change the numbering for the transition diagrams; section 3.1 is for Login, section 3.2 for Search Student Info, etc.
 - List the important (goal-oriented) use cases first, then the support and maintenance use cases later.
 - For better readability, put related use cases into the same transition diagram.
3. Create the basic **scenarios** for **all important use cases**.
 - That helps you to figure out the transition diagram.

Submission

- Each group (company) submits the partial SRS and UI file (**two documents, ONE copy**) into iSpace and GitHub .
 - **Deadline: noon, Saturday 28 March 2026.**
 - Don't submit too close to the deadline!
 - On the cover of the SRS next to the student names, leaders (with the support of most of the team) indicate how much each member contributed: Full, Fair, Little or None.
