

Lab 3 Tasks

Advanced Software Development Workshop
Spring 2026

Main Tasks

Teacher

1. Feedback from last week: Questions List 2 (Q List 2)
2. Project description Mentor Care System (MCS) long version
3. Explain the rest of SRS template

Students

4. Prepare the partial SRS document

Task1: Feedback from Last Week

1. Some groups used jargons such as communication protocol, database, GUI and developer's IDE.
2. Some groups asked questions only developers care about.
 - ✗ How to avoid data loss and stable connection?
 - ✗ How to reduce program runtime memory requirements?
 - ✗ How can websites prevent malicious hacker attacks?
3. Some groups asked marketing questions.
 - ✗ How to promote the product?
 - ✗ When is the delivery time?

Task1: Feedback from Last Week

4. Many groups asked only a few questions on system function details. Should ask questions such as

- ✓ Who are the different users?
- ✓ How do the different users use the product?
- ✓ How does the system authenticate the different users?
- ✓ Where are the data stored? At a data provider's organization or at a dedicated server in MCS?
- ✓ How does a data provider put data into the system? How does a data consumer learn about, request and access the data?

Task1: Feedback from Last Week

- Question List 2 (QL2) has higher requirements than QL1.
 - If a group only (slightly) modify QL1, paste sample questions or missing most of the SRS, the highest grade for that group is a B (for QL1 and QL2).

Task1: Feedback from Last Week

- On **Meeting Minutes**:
 - Need to report if someone is sick or has a valid excuse for being absent.
 - We use the minutes to determine how well (or not well) the group members are working together.
 - Specifically, we look for **unexcused absences** in the minutes.
 - Some tips on the minutes:
 - You can make different commits to different files, and then push them together. Please avoid something like “upload questions list 2” as the commit for the minutes
 - Don't put the question lists in the meeting minutes. Meeting minutes are used internally, but question lists are provided to the customer.

Task 2: Project Description, long version

- From iSpace, download the document project description MCS long version.
 - Pretend this document contains the customer's answers to Question List 2.
 - Use it as a reference in your SRS.
 - Fill in the specified sections of the SRS using the info from this project description long version.

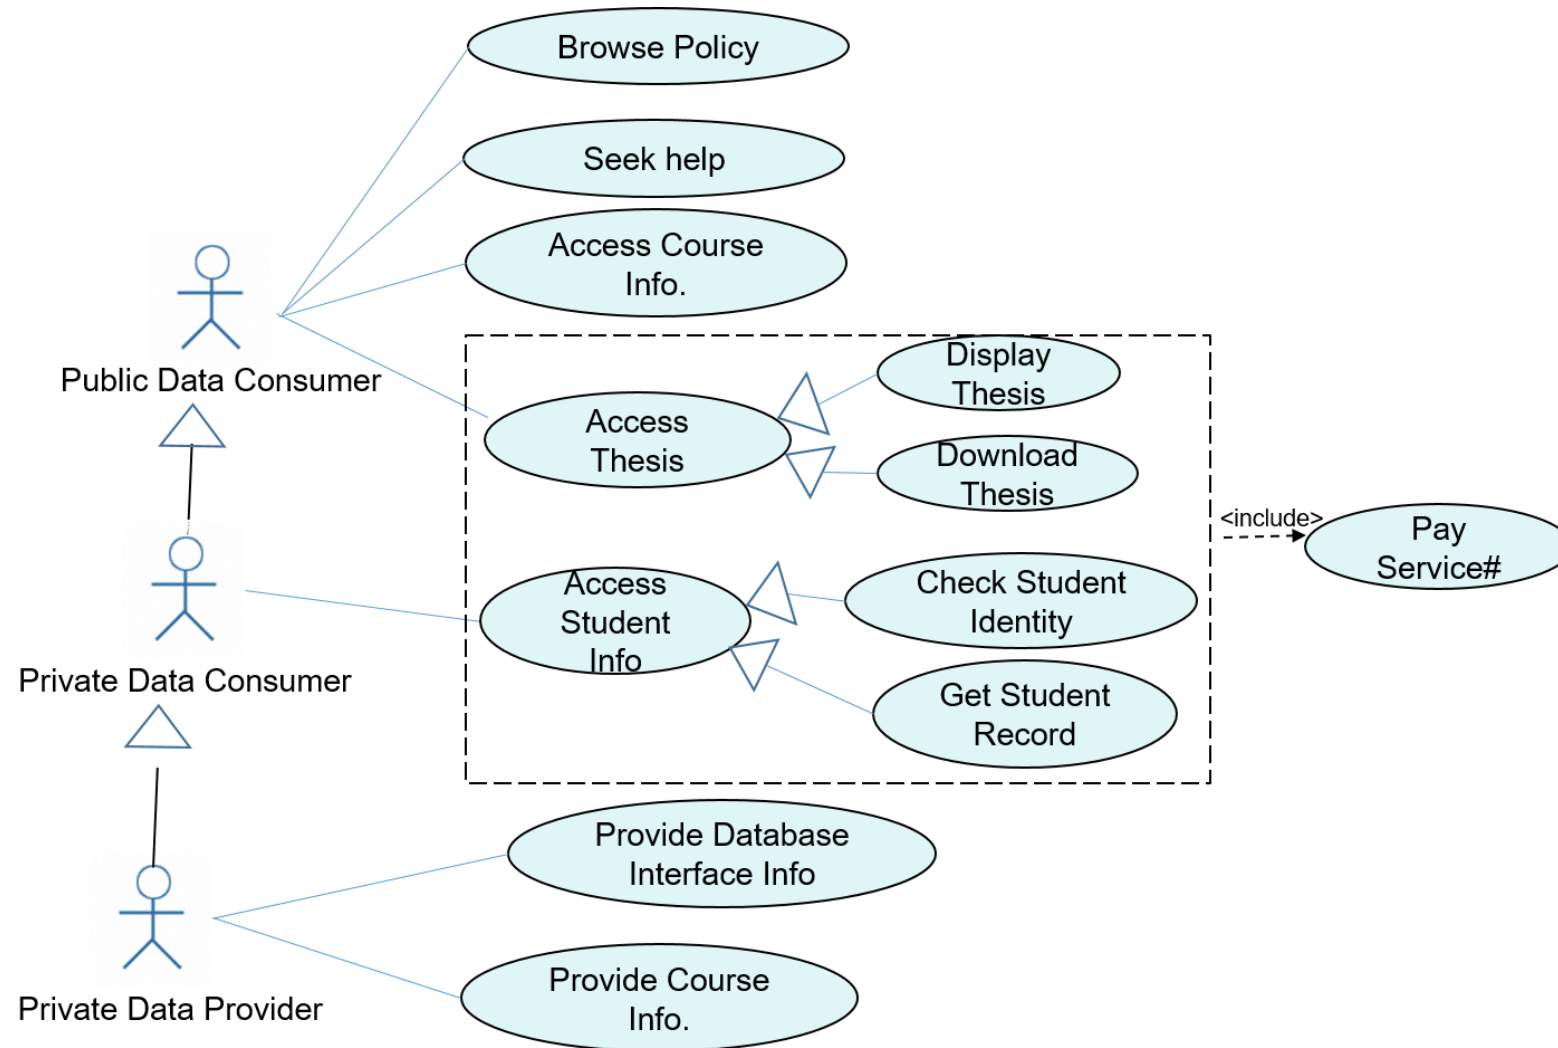

Task 3: Explain SRS template

- Software Requirement Specification (SRS) template is in iSpace.
- Students should replace *<italic text>* with the actual text.
- Teacher explains the whole template **EXCEPT Sections 2, 3, 4 and 5**
 - We've explained Sections 2, 4, 5 last week, and we will do Section 3 later.

Task 4: Prepare Partial SRS

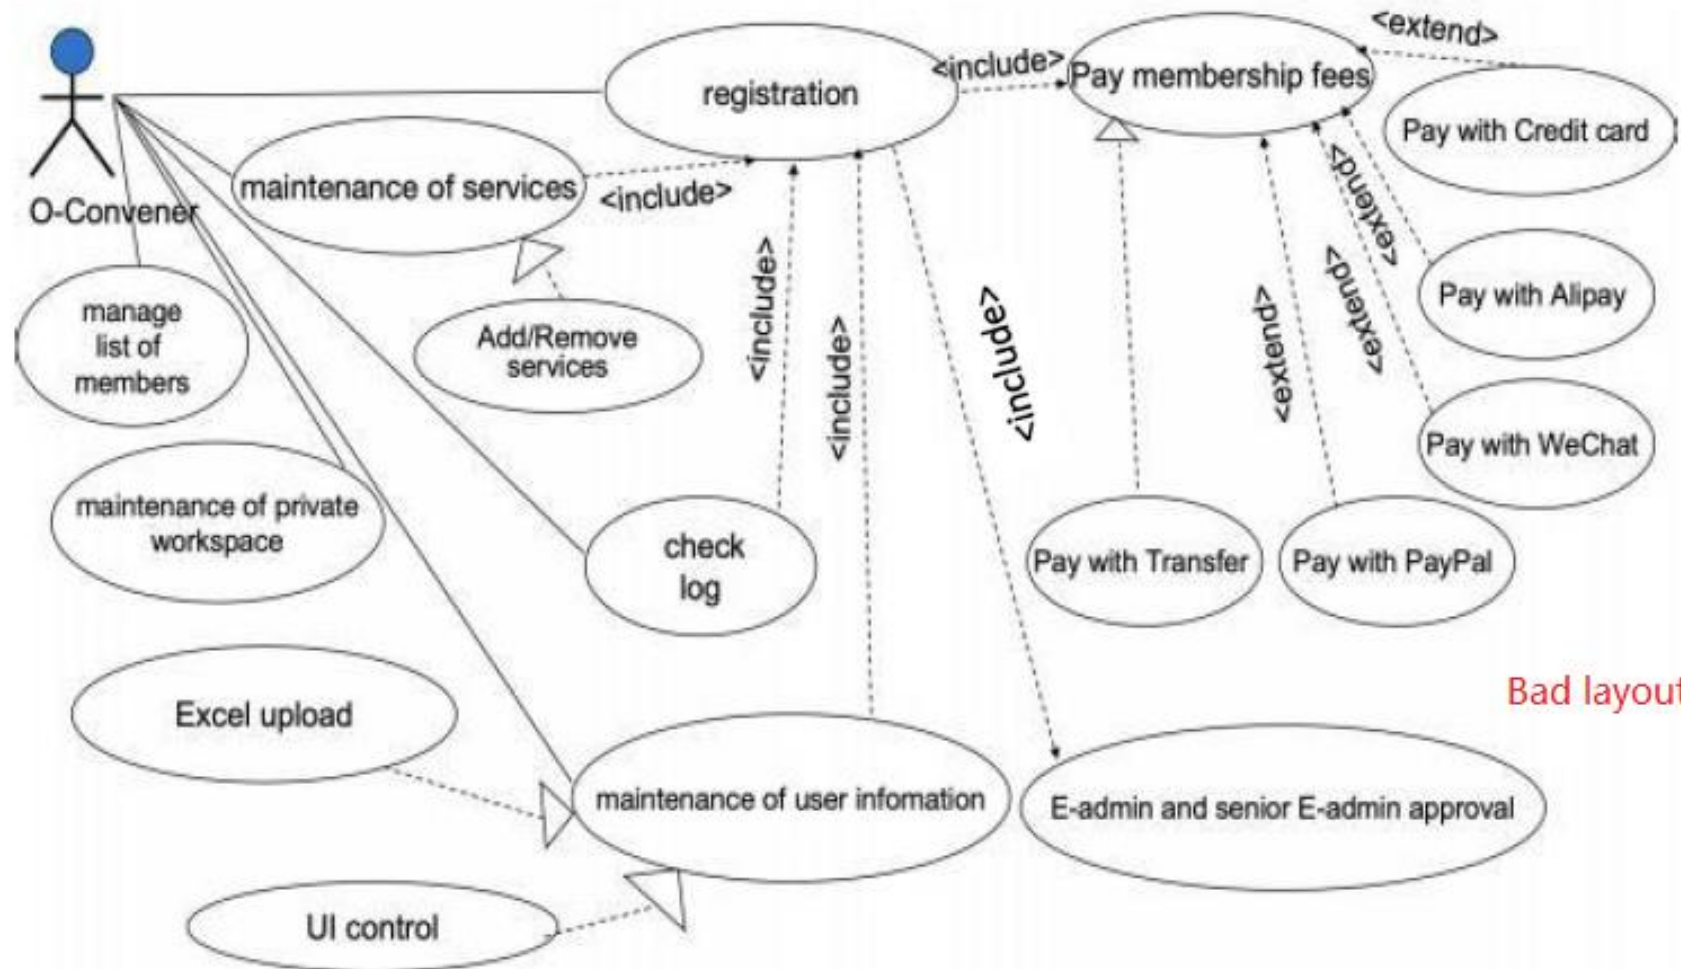

- Students will finish the SRS **except** Section 3 and 4.1
 - We will do Sections 3 and 4.1 later.
 - Fill in the required text in the other sections.
- Draw two diagrams:
 - **Context model** in Section 2.1
 - Candidate components : Mentor Caring System, Login Verification, BNBU User Database, BNBU Student Info Database, BNBU Human Resource Database, BNBU AR Database, Communication System.
 - **Attention: some of the above components might not be in the model.**
 - **Use case diagram** in Section 2.2
 - Please make the **diagrams big and readable**; otherwise, points would be deducted.
 - No hand-drawn diagrams allowed.

Use Case Diagram: Good Example

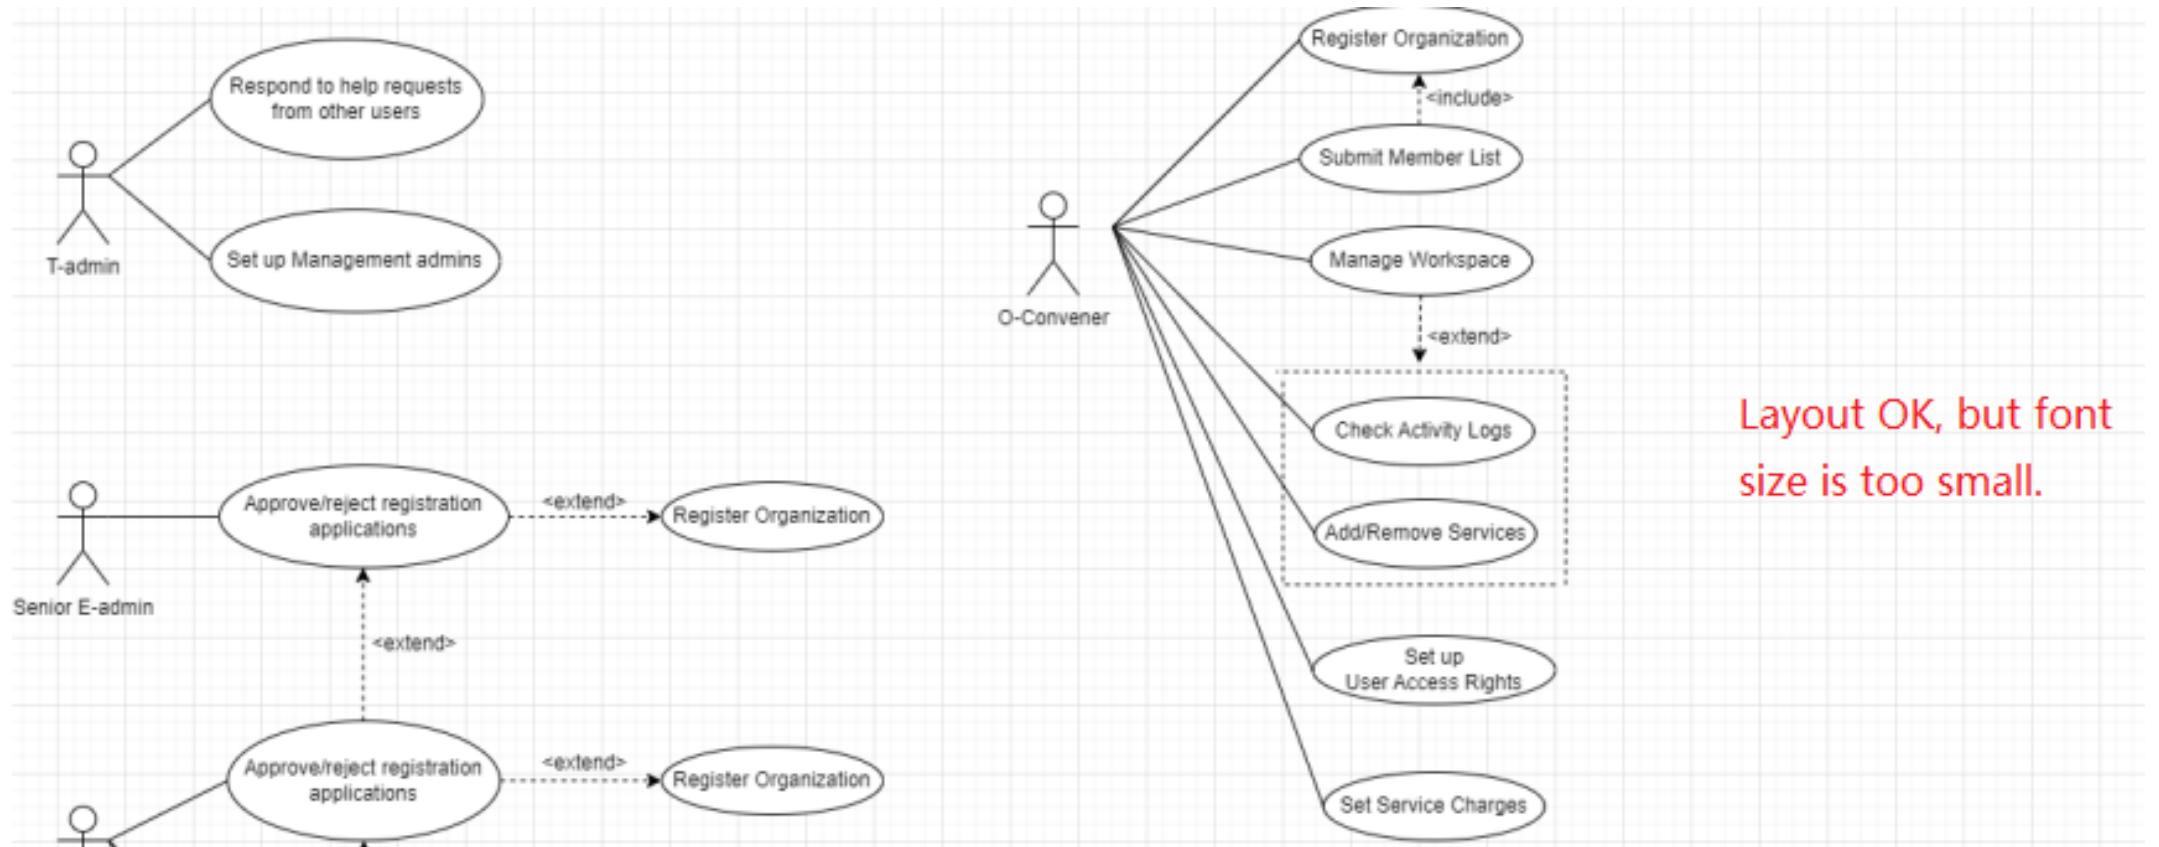

Good layout and
font size

Use Case Diagram: Bad Examples

Bad layout

Use Case Diagram: Bad Examples

Task 4: Prepare Partial SRS

- Write a **scenario** for the use case Search Mentor Info.
 - Given a group ID, we want to find out the mentor's name and check the record of (any) one student in that group.
 - You don't need to write the scenario Login. In the first step of this scenario, just say "The user login (see the Login scenario)." or "Assume the user has login".
 - Put the scenario for Search Mentor Info in Section 2.2 below that use cases.

Task 4: Prepare Partial SRS

- Each group (company) submits the partial SRS (**one copy**) to iSpace and GitLab.
 - The contribution level for each student is “FULL” ~~by default~~.
 - If a student is **not contributing enough** to the group, the leader (with the support of the rest of the team) can put “FAIR”, “LITTLE” or “NONE” next to the student’s name on the **cover page**.
- Each group’s secretary submits the meeting minutes to GitLab.
- Deadline*: **23:59 pm, Fri 13 Mar 2026**

* There is a few minutes of grace period after the DDL in case any network or unusual problems occur. But do respect the DDL because the length of the grace period is not guaranteed.
